

Lab Cycle 2

CO2: Learn and design client-side validation using scripting languages.

Program # 6

Create a HTML page to explain the use of various predefined functions in a string math object in java script.

PROGRAM CODE:

Frame.html

```
<html>
<frameset cols="50%,*">
<frame src="string.html">
<frame src="math.html">
</frameset>
</html>
```

string.html

[illegible]

[illegible]

```
function string(){
```

```
var text1 = document.getElementById("t1").value; var n1 =
document.getElementById("t2").value; var n2 = document.getElementById("t3").value; var
n3 = document.getElementById("t4").value; var n4 = document.getElementById("t5").value;
var n5 = document.getElementById("t6").value; var text2 =
document.getElementById("t7").value; var text3 = document.getElementById("t8").value;
var text4 = document.getElementById("t9").value;
document.getElementById("d1").innerHTML = "<u>substring("+n1+", "+n2+"</u>";
document.getElementById("demo1").innerHTML = text1.substring(n1,n2)
document.getElementById("d2").innerHTML = "<u>substr("+n3+", "+n4+"</u>";
document.getElementById("demo2").innerHTML = text1.substr(n3,n4);
document.getElementById("d3").innerHTML = "<u>slice(0, "+n5+"</u>";
document.getElementById("demo3").innerHTML = text1.slice(n5);
document.getElementById("d4").innerHTML = "<u>replace("+text2+", "+text3+"</u>";
document.getElementById("demo4").innerHTML = text1.replace(text2,text3);
document.getElementById("d5").innerHTML = "<u>concat(</u>";
document.getElementById("demo5").innerHTML = text1.concat(" ",text4);
document.getElementById("d6").innerHTML = "<u>length of </u>"+text1;
document.getElementById("demo6").innerHTML = text1.length;
```

```

document.getElementById("d7").innerHTML = "<u>converting to uppercase</u>";
document.getElementById("demo7").innerHTML = text1.toUpperCase();
document.getElementById("d8").innerHTML = "<u>converting to lowercase</u>";
document.getElementById("demo8").innerHTML = text1.toLowerCase();
}
</script>
</body>
</html>

```

math.html

```

<html>
<head>
<style>

Program # 7

Generate the calendar using JavaScript code by getting the year from the user.

PROGRAM CODE:

Calendar.html

```
<html>

<head>
  <title>calendar</title>
</head>

<style>
  table {
    border-collapse: collapse;
  }

  td,
  th {
    border: 3px solid black;
    padding: 8px;
    text-align: center;
  }

  th {
    font-weight: bold;
    background-color: #E6E6E6;
  }
  td{
    font-size: 50px;
  }
</style>

<body style="background-color:powderblue;">
  <div class="myDiv">
    <h2 style="color:black; text-align:center;"><u><b>CALENDAR</b></u></h2>
  </div>
  <center>
```

Enter the year:

```
<input type="text" placeholder="yyyy" id="t1"><br><br>
```

Enter the month:

```
<input type="text" placeholder="mm" id="t2"><br><br>
```

```
<button type="button" onclick="call()">Generate Calendar</button>
```

```
<center>
```

```
  <h2 style="color:black;" id="h1"></h2>
```

```
</center>
```

```
<br>
```

```
<br>
```

```
<div id="demo"></div>
```

```
<script>
```

```
